

You could save a life.

Apply for an AED grant.

Sudden cardiac arrest is responsible for numerous deaths in the Yadkin Valley every year. Studies have shown that many people who die from sudden cardiac arrest may have been saved if a portable AED was available.

An AED is an electronic device designed to deliver an electric shock to a victim of sudden cardiac arrest. Ventricular fibrillation may be restored to normal rhythm up to 60 percent of the time if treated promptly with an AED.

We are accepting applications to place automated external defibrillators (AED) in area organizations.

At Hugh Chatham Memorial Hospital, we are taking health care beyond our walls by accepting applications to place portable AEDs throughout the Yadkin Valley at no cost. **This is a \$2,000 value.**

To be considered, go to HughChatham.org/AED and complete the application, or email eparks@hughchatham.org to request an application.

Each organization selected will be provided with a wall-hung portable AED, and key personnel will be provided with training on how to use it, as well as how to administer CPR.

The deadline for applications is 7/31/2016. There are a limited number of portable AEDs available, and you will be notified if your organization is chosen to receive one.
